Mitutoyo Series 2 One Revolution Dial Gage

- One-revolution dial indicators are nearly fool-proof in their operation, since the indicator needle travels around the dial face only once per the full stroke of the spindle
- Strengthened against shop contaminants with a stronger seal, and more robust gear mechanisms make this tool more resistant to rapid spindle motions and shock

MADE IN THE USA

- Measures the diameter of any hole within range of its interchangeable probes
- With the indicator set to the nominal dimension and its dial adjusted to zero, the probe is inserted in the hole with variations to .0001” read on the indicator
- Measurements are taken by comparison, therefore a set master such as gage blocks or bench type micrometer should be used as a reference standard

Hardness Tester Information

Hardness Tester Set Up

Make sure all surfaces are free of dust and oil. Wipe penetrator, spindle mount, anvil surface, anvil base and mount, test piece and items to be tested with clean lint free cloth to insure good contact on all surfaces.

Selecting the type of test to perform, penetrator and weight setting used

A scale: Used for testing hardness of metals such as tungsten carbide alloy, etc. over 70 Rockwell hardness on the C scale. Also to be used when testing hard sheet materials and surface quenched (case hardened) materials. Use diamond penetrator and set weight selector to 60kg.

B scale: Used for testing hardness of softer or mild hardened metals and unquenched steel part. : Use 1/16” steel ball penetrator and set weight selector to 100kg.

C scale: Used for testing hardness of heat-treated steel parts. Use diamond penetrator and set weight selector to 150kg.

Seating the penetrator to eliminate clearance between the penetrator and the mounting spindle.
- Seating procedure: Place the penetrator in the spindle and turn mounting screw slightly to hold penetrator in place. DO NOT TIGHTEN AT THIS TIME
- Place on flat anvil and appropriate test block to correspond with penetrator and the scale test to be preformed (A, B or C)
- Pull front load lever forward to apply test weight (Load)
- In the load position tighten the screw to hold penetrator firmly
- Swing back lever to lock position (unload) to release test weight

Checking Hardness Tester Calibration

Price	The repeatability of the testblock readings shall be not greater than:
Rockwell C Scale:	
Price	0.5
Below 60	1.0
Rockwell B Scale:	
Price	1.0
Below 45 to 1.5, inclusive	1.5
Rockwell A Scale:	
Price	0.5
Below 80 to 60.5, inclusive	1.0
Rockwell 30 N Scale:	
Price	0.7
Below 77.5 to 41.5, inclusive	1.0
Rockwell 30 T C Scale:	
Price	1.0
Below 46.2 to 15.0, inclusive	1.5

If a tester is in constant use, checking the tester with test blocks should done daily to see if tester is out of calibration or if the penetrator is damaged.

If used throughout a given scale, the recommended practice is to check it at the high, low and middle range of this scale. For example C scale: the tester should be checked at C63, C45 and C25.

If only one or two ranges are used, test blocks should be chosen which fall within ±5 hardness numbers on any scale using the diamond penetrator and ±10 numbers on any scale using the ball penetrator.

Running a minimum of 5 tests, the average must fall within the tolerances indicated on the block for the tester to be considered in calibration. In addition, the difference between the highest and lowest reading on the 5 tests must not be greater than the value specified in table shown for the hardness range of the test block. If the average of the five readings is outside of test block limits, the recommended practice is to clean and examine the tester according to the instruction manual. Before assuming that the tester is the prime cause of readings outside of test block limits, replace the ball in the ball penetrator or examine the diamond point of the diamond penetrator. Replace the penetrator if it is damaged.

Spacing of indentations on the test block is also important. The same rule applies as when testing any material: the distance from center to center of indentations must be at least three diameters. The readings, usually higher, from any indentations spaced too closely together should be disregarded.

Quick Setting Compound Kits

"Facsimile" is a special plastic compound kit which is used for duplicating surface flats, roughness and for dimensional transfer of inaccessible locations. Many other applications are listed below and many more in our free 20 page applications booklet

- Make duplicates for measuring, such as gages, etc
- Test surface geometry, flatness, microfinish, etc
- Make permanent records of surface geometry, etc
- Make custom holding and nesting fixtures
- Make quick jigs
- Make excellent stylus patterns
- Make instant molds and patterns
- Cast small run parts and prototypes
- Mask, fill in and seal
- Fretting depth of blade dovetails in jet engines
- Makes potting, bonding and repairing easy
- Closer inspection can be performed by allowing the casting to cure in a pressure vessel (15 psi)
- FACSIMILE - will not affect the surface of ferrous or non-ferrous materials to which it is applied
- When casting in a "Confined" area, it is better to cast 1/2 of the internal shape
- Remember - when casting without releasing agent, an ACETONE soak removes FACSIMILE
- Hazard Code: 04
- Class 3 UN#1247

reprorubber Thin Pour Metrology

Casting Material

MADE IN THE USA

THIN POUR (No. 16135)
Final Color — LIGHT GREEN
For internal-shape applications where a thin pour will completely fill the cavity without voids. Hazard Code: 58
A complete replica casting is quickly formed
- Manipulation time is 2 minutes and cure time is 12 minutes
- Start to finish: 14 minutes

You Can Take Impressions Of:
- All metals non-metals paper or cardboard items
- All plastics, rubber,ceramic, glass items,wood, marble, etc

Other Uses Include:
- Fixturing where semi-rigid structure is desired
- Making joints where flexibility is required
- Prototypes of rubber type components such as gaskets, washers, etc
- As a mask for high temperature plasma spray of metallic coatings

Physical Advantages Over the Hard-Copy Replicas:
- Replica is easy to remove — even if there are under cuts or grooves
- Cross-sectioning of replica is easily accomplished with a knife or razor
- It can then be checked on an optical comparator or microscope
- Surface finish replication is exact with excellent optical properties
- Reprorubber copies can be recopied (copy from a "female mould" yields a male-shaped replica)
- Replicas are permanent — will not leach or ooze out nor out gas
- No more 16 hour cure times as with RTV SILICONES
- More accurate than all other RTV COMPOUNDS
- REPRORUBBER putty will withstand up to 300° F (or more)

reprorubber Quicksetting Putty Metrology

Casting Material

MADE IN THE USA

QUICK SETTING PUTTY (No. 16130)
Final Color — LIGHT BLUE
Roll two equal-sized balls of catalyst putty and base putty and simply knead them together like dough. Excellent for external shapes. Simply spread over master pushing down with fingers and wait for cure 8-10 minutes. You have 2-3 minutes of manipulation time. Therefore 13 minutes start to finish. You can also cast internal shapes and cavities but some pressure should be applied such as a weighted object on top
Exotic Metrology-Grade Rubber — Self-Curing in Minutes Virtually Perfect Replica Castings of Internal and External Forms Non-Toxic — Easy to Use — 100 Times Faster Than RTV Silicones - No Release Agent is Ever Needed
Hazard Code: 58

Machineable Wax

You can easily machine Flexbar Machinable Wax without the need for costly and messy coolants or lubricants, because MACHINABLE WAX is “self-lubricating”, “non-abrasive” and it will not fuse when machined at high-end spindle rpm’s and feed rates. Unlike wood or plastic, MACHINABLE WAX will not “gum up” on tool bits. As illustrated by the machined and assembled prototype on the front of this bulletin, sharp edges can be maintained, accurate threads can be cut and thin wall sections maintained with the quality of surface finish capable of being produced by your cutting tools and machine. MACHINABLE WAX is not cellular, grainy, or abrasive so “voids” in machined surfaces (common with plastics and wood) and “tool wear” are negligible. Flexbar Machinable Wax will also machine “within designated tolerances” to provide you with a dimensionally accurate prototype that can be assembled for checking.

- Hardness: 50-55 (Shore “D” scale)
- Specific gravity: 92
- Flash point: 575°F

Starrett Verstix™ Bandsaw Blades

- Developed and tested by Starrett, with a patent application pending, Versatix™ MP band saw blades set new standards in cutting structural steels, sections, tubes and small solids
- New tooth design resulting in a significant increase in tooth strength and consequent reduction in tooth strippage
- The perfect choice for cutting sections, structurals, tubes and small solids
- Ideal for use on manual “pull down” band saw machines where uncontrolled feed rates can easily overload the teeth with a standard blade

PROTO® Retaining Rings

MADE IN THE USA

Standard Rings:
- Used to help secure sockets onto drive tools
- Not intended to bear any load
- The rotational forces are between the drive tool and the socket

Crush Gauge Rings:
- 3/4", 1" and 1-1/2" drive retaining rings are designed with a resin crush gauge to help identify when to replace worn sockets
- The resin crush gauge on the pin helps indicate when a socket is excessively worn and should be replaced
- Drive tool and socket should line up when in use and should not pinch the crush gauge
- One piece construction, no loose parts. Pin made of resin which allows the material to compress without breaking

Since 1882, Williams has met the harshest challenges of the most demanding and critical industries with high quality hand tools. Williams was among the first manufacturers in the world to offer mass produced drop-forged tools, a 15° angle wrench, and heavy-duty slugging wrenches.

Bahco, inventor of the original adjustable wrenches and a leader in ergonomic hand tools and cutting tools, has delivered innovative products and solutions since 1886. Bahco products are designed for professionals of various industries, such as aviation, oil & gas, metal cutting, building and construction, automotive, landscaping and vineyards. The vast majority of Bahco products are manufactured in our own factories located throughout Europe.

CDI manufactures and sells more professional grade torque products than anyone in the world. CDI's mechanical torque product lines include click type torque wrenches, dial indicating torque wrenches, torque limiting screwdrivers, calibration equipment and a number of special application torque products. CDI has long been a major innovator and a leader in electronic torque measurement and torque calibration equipment.

Hazardous Materials Service

Shipments of hazardous material must comply with Department of Transportation Hazardous Materials Regulations, Title 49 of the Code of Federal Regulations, and UPS Hazardous Materials Service guidelines. Therefore, all shipments of chemicals and fluids are subject to special packaging, labeling, controls, or restrictions depending on the chemical content and quantities. The Hazardous Code Key identifies the shipping methods allowed and the additional handling charges that apply. These charges are in addition to the UPS freight charge and are subject to change . Multiple boxes may be required based on size, weight, and chemical content restrictions. All small package shipments containing Chemicals and Fluids with a Hazardous Code will be shipped via UPS prepaid and add. No collect or 3rd Party billing.

TRICO Manual Cyclic Pumps

Applications:
- PM Series pumps are used in applications where a fixed output of lubricant is desired
- With the PM-10 series, the leverage of the pump handle enables the unit to deliver a higher pressure than most models, providing the ability to lubricate points having some back pressure
- With the PM-20 series, lubricant output takes place upon release of the handle using spring discharge to assure the correct amount of lubricant is applied
- These pumps are commonly used with meter units in single or multiple point applications

Features:
- Aluminum die cast reservoir provides long life
- Outputs to 8 cc/stroke
- Sight gauge provides liquid level observation
- Large fill port for easy adding of lubricant
- Drop-in fill port keeps oil clean
